

Dear AWIS Members and Guests,

It is with my pleasure to announce the first lecture on our monthly series titled:

“Why Women Can Gain the Edge in STEM Careers”

STEM business and employment opportunities are increasing and evolving in response to global economic changes—and women must respond to these if they are to redress gender imbalances in the workforce and improve their economic standing.

Our lecturer is Mary Beth Green, a scientific recruiter with Kelly Scientific Resources. Kelly Scientific Resources, is the scientific arm of Kelly Services. We specialize in placing individuals with chemistry and biology backgrounds into a variety of lab and non-lab positions. I have personally worked for 15 years in scientific staffing and have a great interest in business intelligence concerning employment trends, workforce attitudes and motivators, and the future of work as it relates to science.

Thursday, June 19

6:00 – 7:30 PM
